

Frontiers in European Research on Liquid Crystalline Soft Matter

LC Lab Bandol, France, May 27-29th 2009

Session ii. Drops, bubbles, tubes, foams and films

Pearl drops

While drops on solids usually form kinds of lenses, there are a few situations where they can remain quasi-spherical. We describe different tricks to generate such liquid pearls (texturing or heating solid substrates, texturing liquid surfaces). Then we focus on a few dynamical situations: the absence of contact line dramatically affects these situations, by minimizing the effect of viscosity, thereby again contrasting with observations of more "common" drops.
